

**Think your first idea is always your best?
Think again.**

**In this Count-the-Squares Challenge, you will
push past the obvious and dig deeper for answers
that will surprise you.**

A Detective Quiz

It's time to put your detective skills to work!

Squares have four equal sides. How many squares do you see in the graphic below? After you see one possibility, look for a second and then a third.

Your first answer: _____

Now, look for more: _____

Look one more time: _____

Your **FINAL** answer: _____

Always look for second and third possibilities. Your first answer often isn't your best solution.

Answer to How Many Squares Quiz: The answer is 30 squares. If you zoom really close on your computer screen, you might also be able to count the pixels used to make this graphic! Since pixels are square there are more than 30 squares. The answer would be based on the resolution of the monitor.
